## Weather Widget

---

# Overview

---

The Weather Widget available in the Content Designer has been greatly improved with a new, modern look and a host of new features that give you a lot of control over how weather is presented in your content. Choose from 5 completely new layouts with a choice of 4 icon sets. The Weather Widget can display weather conditions from the players default location or you can choose to show weather from other location. This allows you to show weather from multiple locations on the same screen.

## Highlights

- 5 Layout Options
  - Current
  - Hourly
  - 3 Day Forecast
  - 5 Day Forecast
  - 7 Day Forecast
- Selectable Options

Displays the weather over a 5 day period. The screen shot below features the Modern Black icon set with all selectable options selected.

## 7 Day

Displays the weather over a 7 day period. The screen shot below features the Traditional icon set with all selectable options selected.

# Using the Weather Widget

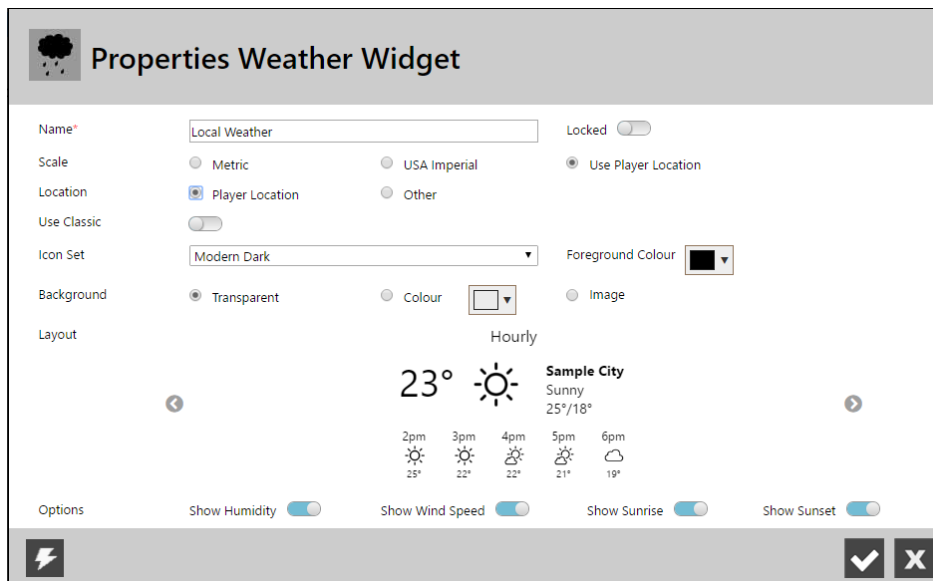

The existing Weather Widget has been updated to include the new features. If you are already using the Weather Widget on existing content, it will continue to work using the classic weather layout until you change it.

As with all Content Designer widgets, to add the Weather Widget to your content, simply drag and drop it from the Widget List onto the design surface. You can add multiple Weather Widgets to the same content to display weather from multiple locations.

You can size and positioned the widget to fit your design, the Weather Widget will try to automatically size itself to fit the size and dimension that you set. To set the properties, double click on the Weather Widget to bring up the property editor.

## Weather Widget Properties Editor

### Properties

The following table lists each of the available properties and how they affect the Weather Widget.

Name	A descriptive name for the widget
Locked	When the Locked property is ON, it prevents the widget from being resized or moved on the design surface
Scale	Determines which scale will be used to show the weather and optional details. You can choose between Metric or USA Imperial or the players default location can be used if you select Use Player Location
Location	Allows you to report the weather from a specific location or from the players default location. If you select Other, a drop down list with available Locations will be listed. The Locations are populated from your Servers Locations section. If your desired location is not listed, simply add a new Location in the Location area

NOTE: If you select 'Use Player Location' you must ensure that each player has been assigned a Location in its properties

Use Classic	Allows you to use the old weather widget if desired
Icon Set	Choose the icon set that you would like to use with the widget. There are currently 4 different icon sets to choose from
Foreground Colour	Select a colour to use for the textual information
Background	Determines the background for the widget. Select Transparent for a see through background, Colour to use a specific colour or Image to use an image as the background
Layout	This is where you can select which of the 5 layout types to use. Click on the left and right arrow buttons to page through the options
Options	Allows you to individually show the Humidity, Wind Speed, Sunrise and Sunset information
